C O U R S E S

External courses at EPAM

Front-End

01.10.2021 - 01.01.2022

Internship at the Modsen company

Front-End

18.04.2022 - 18.07.2022

PROJECTS

- Weather App - an application that displays the weather in populated areas with additional visualization. At the first stage, the user's location is determined automatically.
- Toast Lib - toast Javascript library, for presenting non-blocking notifications. It is extensible and customizable
- Markup - adaptive layout of a typical page of an Internet resource in the format of the JS language, syntactic sugar JSX and the stylization system React of Styled Components
- Post App - multifunctional application for viewing posts. There is a mini market and a gallery with photos. All data was obtained using public APIs
- Drawing Machine - drawing apps with lots of brush and canvas settings
- Expression-Calculator - the application provides basic arithmetic operations, an expression builder and a complete history of all expressions.

ABOUT ME

I am well versed in all the basics of web application development and am happy to share my knowledge with everyone. I like to write code and see the result on my screen. For many people, it looks like magic.

I like to use JS in my projects because it is such an elegant language with so many goals and such a bright future.

My main skill is self-motivation to learn something new. I am happy to study what I am interested in.

I am motivated by the idea that in the future I will be able to create something and millions of people will use it.
